

What is Badgr Pathways?

Badgr Pathways, a companion app to Badgr, allows Issuers to combine and connect Open Badges from multiple sources into a meaningful pathway for learners.

Track group and individual progress along the pathway and award completion badges automatically. Users can track their own progress and look ahead to plan the next steps in their learning journey.

The screenshot displays the Badgr Pathways interface. On the left, a pathway diagram shows a sequence of elements: Biotech Lab Assistant Certificate, Biotechnology Laboratory Technician Certificate, and Advanced Microbiology Certificate. Below these, 21st Century Skills (Critical Thinking, Collaboration, Empathy) and Office Skills (Microsoft Excel) lead to a Job Ready Certification. A legend indicates 'Selected Element' (red dot) and 'Required Children' (purple dot). On the right, a detailed view of an 'Associate Degree: Biotechnology' badge is shown, including a 'Completion Badge' and 'Required Children' (Advanced Microbiology Certificate). A quote is overlaid on the image: *"Stacking credentials is no longer just a naming convention - and sharing badges to a social network is no longer the end of their usefulness."*
